22830	7590	01/17/2006	EXAMINER	
CARR & FERRELL LLP 2200 GENG ROAD PALO ALTO, CA 94303			PATEL, HETUL B	
			ART UNIT	PAPER NUMBER
			2186	

DATE MAILED: 01/17/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.		Applicant(s)	
	10/608,724		GUSTAFSSON, ANDREAS	
	Examiner		Art Unit	
	Hetul Patel		2186	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 December 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-42 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-42 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 26 June 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This Office Action is in response to the communication filed on December 21, 2005. Claims 1-42 are again presented for examination.
2. Applicant's arguments filed on June 01, 2004 have been fully considered but deemed to be moot in view of new ground rejection.

Claim Objections

3. Claims 10 and 18 are objected to because of the following informalities:

The phrase "... an Mx record ..." should read as "... a Mx record ..." in both claims.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-9 and 11-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fletcher et al. (USPN: 2002/0178238) hereinafter, Fletcher in view of Singh et al. (USPN: 2004/0013113) hereinafter, Singh.

As per claim 1, Fletcher teaches a caching server comprising an answer cache (i.e. the cache which stores the address information that is local within the terminal) configured to access answer information (i.e. the address information); a referral cache (i.e. the cache which stores referral information to forward the query to the remote terminal's answer cache across the communication network) configured to store referral information (i.e. the referral information); and computer instructions configured to translate a domain name into DNS information by examining the answer cache and, responsive to the results of examining the answer cache, examining the referral cache (e.g. see paragraph [0008]). However, Fletcher does not clarify that the answer cache stored answer information in a flat data structure. Singh, on the other hand, teaches that it is beneficial to use the hash table (i.e. the flat data structure) to perform the interface ID (i.e. the answer information) lookup because it reduces the number of memory accesses and as a result of that, it is faster than the lookup in the tree structure (e.g. see paragraph [0050]). Accordingly, it would have been obvious to one ordinary skilled in the art at the time of the current invention was made to implement the flat data structure in the answer cache to achieve the benefits described above.

As per claims 11, 13, 17, 26, 34 and 38-39, see arguments with respect to the rejection of claim 1. Claims 11, 13, 17, 26, 34 and 38-39 are also rejected based on the same rationale as the rejection of claim 1.

As per claim 2, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Singh teaches that the flat data structure is a hash table (i.e. 616 in Fig. 3) (e.g. see paragraph [0050] and Fig. 3).

As per claims 25, 29 and 35, see arguments with respect to the rejection of claim 2. Claims 25, 29 and 35 are also rejected based on the same rationale as the rejection of claim 2.

As per claim 19, see arguments with respect to the rejection of claims 1 and 2. Claim 19 is also rejected based on the same rationale as the rejection of claims 1 and 2.

As per claim 3, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Fletcher teaches that when the requested address information is not found at the terminal, the query from the local host is forwarded to the communication network (i.e. to the remote hosts) which stores the requested information (e.g. see paragraph [0008]). Therefore, the pointer/link has to be inherently stored/present in the local terminal cache that points to the remote hosts for the requested information. Fletcher teaches the further limitation of pointers pointing to a tree data structure (e.g. see paragraph [0005]).

As per claims 5, 20-23 and 27-28, see arguments with respect to the rejection of claim 3. Claims 5, 20-23 and 27-28 are also rejected based on the same rationale as the rejection of claim 3.

As per claim 4, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Hudson teaches that the tree data structure (i.e. the hierarchial structure) is configured to store answer information and referral information (e.g. see paragraphs [0005]-[0006]).

As per claim 6, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Hudson teaches that the caching server

(i.e. the name server, 101 in Fig. 1) is also an authoritative server, i.e. a server which has the desired information (e.g. see Fig. 1).

As per claim 7, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Hudson teaches that the caching server (i.e. the name server, 101 in Fig. 1) is also a web server, i.e. the DNS server (e.g. see Fig. 1).

As per claim 8, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Hudson teaches that the referral cache is further configured to store the referral information in a hierarchical data structure (e.g. see paragraphs [0005]-[0006]).

As per claims 31 and 41, see arguments with respect to the rejection of claim 8. Claims 31 and 41 are also rejected based on the same rationale as the rejection of claim 8.

As per claim 9, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Hudson teaches that the DNS information includes an IP address (e.g. see paragraphs [0005]).

As per claims 12, 16, 18, 24, 32 and 42, see arguments with respect to the rejection of claim 9. Claims 12, 16, 18, 24, 32 and 42 are also rejected based on the same rationale as the rejection of claim 9.

As per claims 14 and 15, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Fletcher teaches means for storing data in the first cache such that a time required to examine the first cache is

essentially constant as a function of a number of labels comprising the domain name, i.e. the first cache is the local cache, which uses the flat data structure and since the number of cache entries to search in this flat data structure local cache is fixed/constant all the time, a time required to examine the first/local cache is essentially constant as a function of (i) a number of labels comprising the domain name and (ii) a size of the first/local cache (e.g. see paragraph [0008]).

As per claim 30, see arguments with respect to the rejection of claims 14 and 15. Claim 30 is also rejected based on the same rationale as the rejection of claims 14 and 15.

As per claims 33 and 36, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Fletcher teaches the method of storing data in a cache, the method comprising: requesting DNS information; receiving data in response to the request; classifying the response received; and storing the data received in either a referral cache or an answer cache based on the classification (e.g. see paragraphs [0005] and [0008]).

As per claim 37, the combination of Fletcher and Singh teaches the claimed invention as described above and furthermore, Fletcher teaches that the DNS information includes a numerical address, i.e. the IP address (e.g. see paragraph [0005]).

As per claim 40, see arguments with respect to the rejection of claims 1 and 33. Claim 40 is also rejected based on the same rationale as the rejection of claims 1 and 33.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fletcher in view of Singh, further in view of Ramanathan et al. (USPN: 6,182,136).

As per claim 10, the combination of Fletcher and Singh teaches the claimed invention as described above but does not clearly teach that the DNS information includes a Mx record. Ramanathan et al., on the other hand, teaches that by including the Mx (the mail exchange) record in the DNS information, the email messages can be easily exchanged across the hosts/web using the Mx record (e.g. see Col. 6, lines 25-41). Accordingly, it would have been obvious to one of ordinary skill in the art at the time of the current invention was made to modify the caching server taught by the combination of Fletcher and Singh by including the Mx record in the DNS information as taught by Ramanathan so the email messages can be easily exchanged across the hosts/web. Therefore, it is being advantageous.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hetul Patel whose telephone number is 571-272-4184. The examiner can normally be reached on M-F 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matt Kim can be reached on 571-272-4182. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
